SECRET TEL AVIV
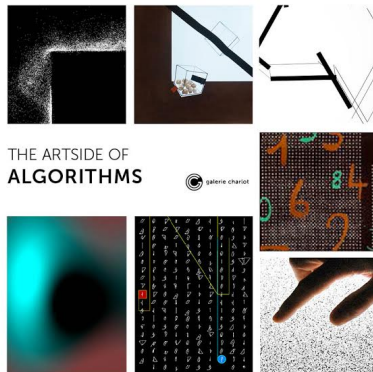

THE ARTSIDE OF ALGORITHMS EXHIBITION OPENING

Sat 27 May 2017 | *7:00 pm – 10:00 pm*
Galerie Charlot – Kikar Kedumim 12, Tel Aviv, FREE

At the occasion of the opening of Galerie Charlot's new space in Tel Aviv Yafo, the gallery presents the group show "The artside of Algorithms", which brings together a selection of works by a group of artists represented by the gallery.

Originally a mathematical notion defining a self-contained sequence of actions to be performed, the word algorithm has recently become a part of our daily lives because of its applications in computer systems, data management through the Internet and more broadly the Big Data.

Algorithms are more and more present in our lives, bringing into question their impact on our decision making, privacy and freedom.

At the opposite side of this marketing and control orientated application of algorithms, since the 60's, a group of artists started using this same mathematical process in order to create art. By appropriating new information technologies for artistic purposes, these artists show an alternative to the mere functional use of the machines by creating fix and moving images.

The exhibition "The art side of algorithms" is a cross-generational exhibition, in which artists use a wide range of media.

Following its focus on digital art, Galerie Charlot is bringing to Tel Aviv-Yafo its particular taste for artistic expérimentation in contemporary art practices. Galerie Charlot focuses on emerging art forms and its challenging vision internationally fostered the gallery's reputation. The new space in Tel Aviv-Yafo is a consequent step of the gallery's international gaze.
